- Anti-phishing protection
- Real-time scanning for protection around the clock
- Automatic scans and updates
- Easy setup and configuration for Mac users without previous technical knowledge

Macs Need Antivirus Protection Software, Just Like Any Other Computer
Mac users have been misled by the common myth that Macs can't get viruses, and that antivirus software is unnecessary. The reality is all machines are vulnerable, and devious cyber-criminals use a variety of malware that threatens Macintosh computers. Worse yet, they're not just targeting Macs—they're after your sensitive personal information and your money. You can protect your Mac and your precious data with Intego VirusBarrier, the award-winning Mac antivirus software.

Real-Time Antivirus with Automatic Scans Keep You Covered 24/7
Intego VirusBarrier provides real-time antivirus protection for Macs, and scans files whenever they're accessed to keep your Mac free of malware. Our Mac antivirus software automatically

checks for the latest updates to make sure you're protected against the newest threats.

Antivirus protection against both Mac and PC malware
Intego VirusBarrier not only protects you from existing Mac threats, it detects PC-based malware so you don't spread infected files to friends, family, or work colleagues.

We know Macs. Our competitors don't.
We build our antivirus software from the ground up for macOS and Mac OS X—and we've been doing it that way since we started in 1997. Our award-winning, highly trusted security products are the optimum solutions for protecting, cleaning, and organizing Macs.

Use a PC? We'll protect that too.
Lots of households have both Windows-based PCs and Macs. To ensure that both have complete antivirus protection, we've partnered with Panda to provide Windows coverage as well.

Our new interface keeps it simple
As Mac lovers, we prefer software of great simplicity. Mac applications should be effective, straightforward and unobtrusive, and that's exactly how we designed all of our security software to operate—the way Macs are designed.

Antivirus protection for iPhone and iPad
Intego VirusBarrier scans and detects malicious files received via email on your iOS devices whenever they're plugged into your computer, and prevents your iPhone, iPad or iPod touch from passing malware to other computers.
