- control EnOcean actors without cable and battery
- Slim wall-mounted wall switch 10.3 x 10.19 x 3 cm
- Two switch covers for double or single switch usage
- Compatible with the EnOcean protocol for Europe and China
- Range 30 meters

The NodOn Wall Switch is wireless and battery-less, EnOcean compliant. The mechanical energy created by pushing the button(s) is transformed, via a revolutionary magneto-resistive generator, in enough electrical energy to send a radio frame to the controlled device. The Wall Switch allows to control any kind of EnOcean compliant device, such as the NodOn Smart Plug, or a Home Automation Gateway. The Wall Switch is delivered with 1 simple button (to control 1 group of devices) and 2 half buttons (to control 2 groups of devices). The Wall Switch has a wall plate, to guarantee an easy mounting into the house: using screws of a mounting box, screwing it on the wall, or simply using the double sided tape strips at the back of the wall plate. Directly compatible with Homee EnOcean and Afriso HG01gateway.
