- Always know if a door or window is open or closed
- Powersupply through solarpanel
- Optional CR1216 battery (not included) for use in dark areas (5-year lifespan)
- Compatible with the EnOcean protocol for Europe and China
- Range 30 meters

The NodOn indoor opening sensor is a wireless and battery-less sensor, EnOcean compliant. Combined with its magnet, the sensor detects the Open or Closed status of the panel (Door or window) The opening sensor can work with any kind of EnOcean compliant device, such as the NodOn Smart Plug, or an Home Automation Gateway. Depending on the settings, the sensor will trig some actions when the panel is Open or Closed, or during opening / closing movement An optional CR1216 battery (not included) can be mounted, increasing the sensor lifetime up to 5 years in total darkness.

Directly compatible with Homee EnOcean and Afriso HG01gateway.
