- 250 LED RGB and white tones including warm white, up to 16 million colors

- 20m length

- Distance between the LEDs 8cm
- A color / effect can be assigned to each individual LED

- Extensive predefined effects, timer in the smartphone app

Twinkly STRINGS is the revolutionary LED light chain that brings the most advanced technology into home decoration.

The RGB colors and white tones including warm white are highlighted by the special matt and flat finish of the Twinkly lens. This results in an even diffusion of the chromatic components without changing the expressiveness.

A variety of effects can be created in conjunction with the Twinkly smartphone app.
Each individual LED can be assigned a color, so extremely individual effects are possible.
The "mapping" function in the app takes over the detection of the position of the individual LEDs in a matter of seconds.

In addition, a Christmas tree with the Twinly fairy lights used can be "read in" via the smartphone camera and thus effects in color, gradient and dynamics can be created specially adapted to this tree.
A large number of predefined light scenarios are already available, and additional effects can be downloaded free of charge from the Twinly Store.
The fairy lights are suitable for indoor and outdoor. (Temperature range -15 degrees - +40 degrees) IP44
Home integration via WiFi (Bluetooth for initial setup), voice control via Google Assistant or Amazon Alexa.
For the illumination of large objects / trees, up to 3x 400 LED light chains can be connected in the app, which can then be controlled as a 1200 LED light chain.

Supply line transformer to the first LED 2.5m.
Energy efficiency A +

Calculation of the length of the fairy lights in relation to the Christmas tree
