- Flexible LED tube, 3m
- Can be grouped with other Twinkly products
- 16 million colors
- Dozens of pre-installed, customizable effects or create your own
- Every single LED from FLEX can be controlled individually

Twinkly FLEX is a smart, neon-like, flexible LED tube that can be controlled via an app and voice assistant.

With a length of 3 m, Twinkly FLEX can be shaped as desired and installed in the desired shape using the wall mountings supplied, bringing new dimensions of lighting design and creativity into

the networked home. Custom decor for holidays / occasions, game room decorations and much more.

As with all Twinkly products, each individual FLEX LED can be controlled individually so that unique effects, gradients and color animations can be created and reproduced.

Twinkly's patented mapping tool uses the smartphone camera to locate the shape and exact location of every inch of the FLEX, no matter what shape has been created.

With this powerful and innovative method, FLEX can be controlled like a screen: Professional, pixel-perfect effects and animations can be played directly.

With the Twinkly app, thanks to a wide range of ready-made effects and animations, tailor-made lighting design installations can be created and with the FX Wizard creation tool, your own effects can be created from scratch. All effects are fully customizable:

Brightness, speed, intensity and color can be changed with a single tap. A color picker helps you choose the perfect shade from more than 16 million options.

An ON / OFF timer and general dimmer complete the control panel and offer unlimited possibilities to create the perfect light decoration. FLEX can be grouped with other Twinkly devices to create larger, synchronized lighting installations.

Twinkly FLEX can be used in combination with Twinkly Music, a small USB device (sold separately) that can identify and interpret any music source playing in the area so that the lights can follow the beat for a WOW audiovisual experience.

Twinkly FLEX can be seamlessly controlled with voice assistants like Google Assistant and Amazon Alexa, as well as Apple HomeKit and Razer Chroma RGB via the Twinkly Chroma Connector to enhance the gaming experience with stunning lighting effects that respond to gameplay.

The first steps with FLEX are very easy: A quick and intuitive set-up process helps to configure the device in seconds via Bluetooth and WLAN.

Twinkly Flex is IP20 certified and only suitable for indoor use.

Supply line transformer to the first LED 2m.

It is not possible to extend the FLEX, but several FLEXs can be combined as a group with the transfer and use of the effects.

Max LED support: 10 devices
